

### Remarks

- **foaf:birthday**, must have a MM-DD value. For this reason, we use the enriched **ptop** vocabulary
- **pext:EMail** is a generic property in the Proton Extension module. Instead, **vcard** is widely used thus is preferred. Alternatively, we use the **pext:hasEMail** which defines exactly a connection of a person with an e-mail
- **wlo:livesIn** belongs to the vocabulary "BBC Wildlife Ontology" and refers to the larger group of biological species. We prefer the **pext:locatedIn** which can relate a person with a city or an area
